

NEW! NHSc Grant Supports New Nutrition Education Resources from the Oncology Nursing Society

Nurses play a central role in the everyday support of patients with cancer, and are uniquely positioned to identify and address nutrition-related side effects. Nestlé Health Science is proud to have supported the Oncology Nursing Society (ONS) with an independent educational grant to develop a nutrition education series for oncology nurses. ONS recently launched a new [Nutrition Learning Library](#), featuring a range of resources to raise awareness of the importance of nutrition in cancer care. Resources supported by the NHSc grant include:

- **Infographic:** “Identifying your Patient at Risk for Malnutrition” – highlights signs of malnutrition and encourages early nutrition intervention to improve outcomes.
- **Podcast:** “Screen and Manage Malnutrition in Patients with Cancer” – 30 minute discussion of nursing considerations for nutrition screening, dietary management strategies, and patient education.
- **Case Studies:** Two interactive case studies exploring nutrition support for patients with [head & neck cancer](#) and [stem cell transplantation](#). Nurses can receive 0.25 nursing continuing professional development (NCPD) contact hours for each case study.
- **E-Learning Course:** “Introduction to Nutrition in Cancer Care” – interactive course on how nurses can incorporate nutrition into practice to affect patient outcomes. Nurses can earn 1.5 NCPD for completing the course.
- **Expert Interviews:** Two video interviews with nutrition experts discussing [care team collaboration](#) and [integrating nutrition into cancer care](#) to improve patient outcomes. NCPD are available for both activities.

The materials described were supported by an independent educational grant from Nestlé Health Science. ONS is solely responsible for the criteria, objectives, content, quality, and scientific integrity of its programs and publications.

These resources are available via the ONS website, and are free to members and non-members alike (users will need to create an account to access some activities). Links to these resources can also be accessed via the Nestlé Medical Hub.
