

Malabsorption affects fat digestion and absorption.¹

Millions worldwide have fat malabsorption, the most common malabsorptive condition.¹

If severe enough, poorly controlled, or if not managed, complications may include¹:

- GI symptoms (e.g., chronic diarrhea, bloating, flatulence)
- Malnutrition
- Weight loss/poor weight gain
- Vitamin & mineral deficiencies

Alfamino[®] formulas are hypoallergenic, amino acid-based with Medium Chain Triglycerides (MCTs) to help facilitate fat absorption¹⁻⁴

Amino acid-based formulas (AAF) are appropriate for use in infants and children with severe malabsorption.¹⁻³

- AAF with MCT are recommended for children with fat malabsorption where there may be decreased digestive & absorptive capacity to help facilitate fat absorption.⁵⁻⁷
- MCTs directly absorb into the enterocyte & do not require traditional fat metabolism and are transported through the portal vein to the liver.⁷⁻⁹

Alfamino®

WIC, Medicaid and SNAP eligible**

Aim *higher* when managing MALABSORPTION

- Alfamino® hypoallergenic, amino acid-based formulas with unique lipid blends are designed to facilitate fat absorption.^{4,7-9}
- Formulated with the highest % of MCTs among amino acid-based formulas.

	Alfamino®	Elecare®	Neocate®	PurAmino® [^]
Made with Free amino acids, the building blocks of protein	✓	✓	✓	✓
Has MCTs to facilitate fat absorption	✓	✓	✓	✓
Infant* (< 1 year)	43%	33%	33%	33%
Junior* (1-13 years)	65%	33%	33%	

*Percentage of overall fat content as MCT

[^]PurAmino® is indicated for 0-24 months of age.
