

Compleat[®]

Nutrient Source
Diversity

As the sole source of nutrition, this makes it extra important for tube feeding formulas to include a broad mix of different foods.

That's why Compleat[®] formulas have been carefully designed to provide complete nutrition from a **broad mix of real food ingredients**, plus essential vitamins and minerals.

Real Food Ingredients:

- Support digestive comfort and microbiome
- Help reduce GI intolerance symptoms
- Help improve bowel function

Just like no two people share the same fingerprints, each of us has our own individual "metabolic fingerprint" or metabolism

A unique metabolism means that we process nutrients from the same foods differently

That's why eating a variety of foods in a rainbow of colors is key to making sure we get the full range of nutrients we need to be healthy

Did you know each of us processes and tolerates food somewhat differently?

COMPLEAT[®] ORIGINAL

KIDS		ADULTS	
150	250	265	375
