Please be advised that certain Nestlé Health Science products have been assigned NDC-Format Numbers. NDC-Format Numbers are not actual National Drug Codes (NDC). NDC Format Numbers are product codes adjusted according to standard industry practice to meet the format requirements of certain suppliers and payers. Nestlé HealthCare Nutrition submits product information including various product codes to the compendia including First Data Bank, RedBook and Medispan but cannot confirm that the NDC-Format Numbers submitted have been published by the compendia.

Storage of Shelf Stable Products

To maintain high product quality, Nestlé Health Science shelf stable products are to be stored unopened at room temperature (59°F – 86°F). Exposure to heat extremes (>104°F for more than 24 hours) may result in:

- A decrease in the level of vitamin availability
- Nutrient content not meeting label claim
- A darkening of the product

Accidental freezing and subsequent thawing should not affect nutrient content. Potential effects of freezing/thawing include:

- Issues with consistency of the product and package integrity
- Product separation

Product Dating Guidelines

Nestlé Health Science uses specific terminology to define when a product can or should be used.

- **“Expiration” Date.** The calendar date on the package indicates the last date the product should be eaten or used.
- **“Sell By” Date.** A calendar date on the packaging indicates the last day the product can be sold.
- **“Use By” or “Best By” Date.** This is the last date a consumer is recommended to use the product while it is at peak quality. It is not a “sell by” or food safety date.

Nestlé Health Science product shippers and individual packages generally set forth these dates in one of two formats:

- A date containing a month, day and year
- A date containing a month and a year (in which case, the determinative date is the last day of the month listed)

Hang Time Guidelines for Using Open and Closed Tube Feeding Systems

Closed System UltraPak® Closed System

The UltraPak® Closed System is a prefilled, sterile, non-air dependent container that may hang for up to 48 hours once spiked with an appropriate administration set. The UltraPak® Closed System is not made with the use of natural rubber latex or the use of BPA.

Open System: Reconstituted Powders or Ready-to-Use Cartons

An open system encompasses reconstituted powders or ready-to-use liquids decanted from a preparation container or original packaging into a feeding container (feeding bag). Higher degrees of contamination have been found in reconstituted powdered formulas and in open systems allowed to hang for extended periods of time.

The following hang time recommendations are informed by the American Society for Parenteral and Enteral Nutrition (ASPEN)*

- For a reconstituted powdered formula or a formula with additives, limit hang time to a maximum of 4-hours.
- For commercially sterile, liquid formulas decanted from a carton, limit hang time to a maximum of 8-hours.

These hang time recommendations assume the formula is kept at room temperature and is subject to minimal handling and manipulation. To reduce risk of contamination, always use clean technique when filling the feeding bag with formula. Fill the feeding bag with only the amount of formula that will be administered within the recommended hang time (i.e. reconstituted powders, formula with additives, liquid formulas). Avoid adding more formula to a feeding bag of existing formula.

The bag and administration set should be flushed with water before adding additional formula. It is generally recommended that administration sets and bags used in an open system should be changed every 24 hours.

Note: This information is not intended to be a substitute for clinical judgement, facility protocols, or policies.

Reimbursement Support Program

Helping patients get the Nestlé Health Science products they need

Call 1-844-283-0365 to learn more or enroll a patient today

<https://www.nestlehealthscience.us/formula4success>

The formula4success® program offers step-by-step, detailed information and support to help patients and caregivers access the Nestlé Health Science formulas they need.

BENEFIT INVESTIGATION

The formula4success® team will guide patients and caregivers through the process and provide step-by-step support to help gain benefit access. Throughout the process, formula4success® will keep the patient, caregiver and healthcare provider updated on the status of the case and benefit investigation.

CLAIM SUPPORT

The formula4success® team provides assistance prior to, and during, the submission of a claim for reimbursement. A dedicated Reimbursement Specialist will help navigate the specific payer's claim submission process to support coverage for enteral nutrition.

CLAIM APPEAL

In the event coverage for a Nestlé formula is denied, a dedicated reimbursement specialist will work with the healthcare team, patient and caregiver to pursue all possible avenues of appeal.

PRODUCT SUPPLY LOCATOR

We will make sure patients and caregivers know where to find their Nestlé products including homecare providers, pharmacies, DME companies and/or on-line.

- Only IMPACT® formulas contain a unique studied blend of L-arginine, omega-3 fatty acids and nucleotides[†]. Used perioperatively, this blend of immunonutrients helps support the immune system and reduces risk of postoperative infectious complications by 51% and prolonged hospital length of stay. These immunonutrients have been found most efficacious for use in major cancer surgery.
- Immune-modulating ingredients supported for perioperative use by the Critical Care Nutrition Guidelines.**
- Very high protein (37% of calories) and supplemented with L-arginine to support wound management.
- For best outcomes, recommend two cartons per day for five days prior to surgery and for at least five days following surgery.
