

Beyond the Algorithm: Using AI to Enhance Nutrition Care

Test Questions

1. Which of the following is the most commonly cited benefit of AI in healthcare?
 - a. Eliminating the need for medical training
 - b. Improving efficiency and reducing time spent on routine tasks
 - c. Replacing human judgment in diagnosis
 - d. Lowering patient expectations
2. Which of the following is NOT typically a use case for AI in healthcare today?
 - a. Drug discovery
 - b. Risk detection for diseases
 - c. Documentation and administrative support
 - d. Replacing the need for clinical guidelines
3. What is one of the main reasons clinicians remain cautious about adopting AI?
 - a. It's too expensive for personal use
 - b. Concerns about accuracy, errors, and patient safety
 - c. It only works in research settings
 - d. Patients refuse to engage with it
4. Which of the following best describes generative AI (GenAI)?
 - a. A type of robot used in surgery
 - b. A subset of AI that creates new content like text, images, or recommendations
 - c. A diagnostic imaging tool
 - d. A type of electronic health record
5. Which of the following is the most realistic role for AI in clinical practice today?
 - a. A fully autonomous decision-maker
 - b. A starting point or supporting tool that requires clinician review
 - c. A replacement for evidence-based guidelines
 - d. A patient-facing diagnostic system with no oversight needed
