

Trusted Source for Tolerance

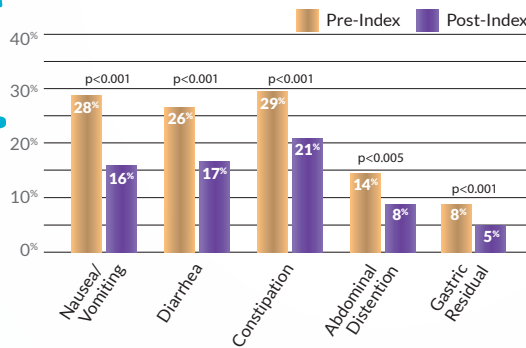

Representing a **44%** increase in adult patients and a **46%** increase in pediatric patients who had **0** intolerance events.

Over **50%** of patients experienced **NO** intolerance events when they used **PEPTAMEN** formulas in a post-acute setting.

When home enteral nutrition patients on a standard intact protein formula switched to a whey peptide-based diet (wPBD), like **PEPTAMEN formula**, major symptoms of intolerance, including nausea and vomiting, diarrhea, constipation, and abdominal distension, *improved significantly.*

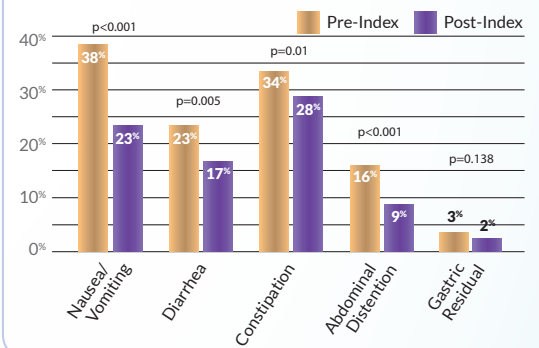

ADULT PATIENTS (18+)

Percentage of Adult Patients Affected by Intolerance Events Pre- and Post-Index (Initiation of wPBD)

PEDIATRIC PATIENTS (Ages 1-17)

Percentage of Pediatric Patients Affected by Intolerance Events Pre- and Post-Index (Initiation of wPBD)

Adapted from: LaVallee C, et al. ASPEN 2020 Abstract, Tampa, Florida. Abbreviations: wPBD = specialized enzymatically hydrolyzed 100% whey protein complete peptide-based diet.

PEPTAMEN Family of Formulas

The Trusted Source for Patients with Intolerance

Ask your Nestlé Health Science Sales Representative about the benefits of using **PEPTAMEN** formulas. Learn more at www.peptamen.com.
